

# LECTURE PLAN – COMPUTER ARCHITECTURE

Lecture 39 of 45

**Topic: Division Algorithms and Floating Point Arithmetic**

**Unit: Unit 7**

## Learning Outcomes (LO)

- LO1: Define and explain the basic concepts of Division Algorithms and Floating Point Arithmetic. (L1 – Remember)
- LO2: Explain the working and important features of Division Algorithms and Floating Point Arithmetic. (L2 – Understand)
- LO3: Apply the concept of Division Algorithms and Floating Point Arithmetic to simple examples or problems. (L3 – Apply)

## Teaching Content

- Binary division concept
- Floating-point representation
- Basic floating-point arithmetic operations

## Teaching–Learning Activities

| Activity      | Description                                                                                                        |
|---------------|--------------------------------------------------------------------------------------------------------------------|
| Demo          | Teacher explains Division Algorithms and Floating Point Arithmetic using simple examples on the board/PPT.         |
| Peer Activity | Students discuss a short example in pairs and compare their answers.                                               |
| Board Problem | Students solve one basic problem based on Division Algorithms and Floating Point Arithmetic with teacher guidance. |

## Assessment Methods

- Quiz: Check understanding of key terms and concepts.
- Assignment: Solve/write a short problem related to the lecture topic.
- Viva: Explain the main concept and one example in simple words.

## Teaching Aids

- PPT with examples, whiteboard, textbook diagrams, and simple classroom examples.
